

William D. Legault

Boston, MA | williamlegault.com | Availability: April - December 2026

Willlegault24@gmail.com | www.linkedin.com/in/william-legault-a1426b2a9 | github.com/Willlegault

Education

Northeastern University

Boston, MA

Bachelor of Science in Computer Science and Biology

Expected Graduation: *May 2027*

Coursework: Database Design, Object-Oriented Design & Cloud Computing, Algorithms & Data Structures, Cybersecurity, Theory of Computation, General Biology & Chemistry, Biostatistics, Organic Chemistry, Genetics and Molecular Biology

Technical Knowledge

Languages: TypeScript, JavaScript, Java, Python, React, React Native, Kotlin

Frameworks and Tools: Tailwind CSS, Express, GraphQL, MongoDB, Supabase, Prisma, AWS, Sentry, Postman

Work Experience

Northeastern University

Boston, MA

Recreation Software Developer (Co-op)

July 2025 – Present

- Led full-stack development as part of a 2-dev team on a React Native fitness app and admin CMS, built to support a rollout of ~6,000 students, transformed a prototype into a production platform deployed via AWS and Vercel.
- Collaborated with managers to design admin workflows, implement live notifications, and streamline AWS infrastructure by optimizing database interactions and load balancer usage for performance and scalability.
- Developed, tested, and optimized the app for both iOS and Android, using crash reports and custom Notion API-based bug reports to improve reliability and user experience.

Sculpt.ai

(Remote) New York, NY

Software Engineering Intern (Part-Time)

Oct. 2025 – Present

- Engineering frontend features for the recently launched iOS and Android app on the App Store with 200+ users, built with React Native, Expo, and TypeScript, integrating Apollo Client for GraphQL data fetching and React Context for global state management across workout, user, and gym flows.
- Building an internal CMS using Next.js and TypeScript to support the app's beta rollout, managing onboarding waves, access controls, and data visualization alongside subscription management and content publishing.
- Built and shipped a React-based analytics application exposing algorithms spanning strength performance prediction and precise nutrition planning to health professionals via REST APIs to verify accuracy.

Northeastern College of Arts and Media Design

Boston, MA

Immersive Media Lab Office Assistant

Jan. 2025 – April 2025

- Educated students on VR technology and creative platforms through 10+ workshops and presentations, working with tools like Unity, Blender, Adobe, Rokoko Motion Capture Tech and Maintenance & Troubleshooting.

Projects

Summit: Debt Relief – React-Native | MongoDB | JavaScript | Node.js | OpenAI API

- Built a full-stack React Native app featuring a GPT-4o chatbot integrated via the OpenAI API, using custom system prompts and MongoDB user data to deliver personalized, context-aware debt relief guidance in real time.
- Developed a repayment calculator and progress tracker that pulls user financial data to run real-time debt payoff simulations, comparing avalanche vs. snowball strategies with a chart projecting debt reduction month by month.

Genomic Variant Analyzer – Next.js | Typescript | Python Flask | Biopython | ClinVar API | Supabase | Recharts

- Built a full-stack DNA variant analysis tool with a Nextjs frontend and a Python Flask backend, using Biopython's PairwiseAligner to classify coding consequences (missense, nonsense, frameshift), query ClinVar for pathogenicity data, and generate plain-language variant explanations visualized via recharts.

Sophia: Philosophical Journal – React.js | Supabase | Node.js & Express.js

- Built a mental health journaling web app using React and Supabase with CRUD functionality, a mood analytics dashboard, full-text PostgreSQL search, and an email-based auth with tags to analyze patterns in user data.

Activities

Hackathons (x2) | Volunteer Snow Removal — local churches & senior living | Lifeguard and CPR/AED certification
